Modern Physics

G. Aruldhas
Formerly Professor and Head of Physics
and Dean, Faculty of Science
University of Kerala

P. Rajagopal
Senior Lecturer, Department of Physics
C.M.S. College, Kottayam
Mahatma Gandhi University

CONTENTS

Preface *xv*

1. The Special Theory of Relativity **1–25**

1.1 Galilean Transformations 1
1.2 Electromagnetism and Galilean Transformations 3
1.3 Michelson–Morley Experiment 4
1.4 The Postulates of Special Theory of Relativity 6
1.5 Lorentz Transformations 7
1.6 Velocity Transformation 9
1.7 Length Contraction 11
1.8 Time Dilation 11
1.9 Simultaneity 12
1.10 Relativistic Mass 13
1.11 Mass and Energy 16
1.12 Space–Time Diagrams 19
1.13 General Relativity 21
1.13.1 Principle of Equivalence 21
1.13.2 Some Predictions of General Relativity 22

Review Questions 23
Problems 24

2. Particle Nature of Radiation **26–38**

2.1 Blackbody Radiation Curves 26
2.2 Planck's Quantum Hypothesis 27
2.3 Planck's Radiation Formula 28
2.4 Photoelectric Effect 29
2.5 Einstein's Photoelectric Equation 29
2.6 The Continuous X-ray Spectrum 31
2.7 The Photon 32
2.8 The Compton Effect 33
2.9 Pair Production and Pair Annihilation 36
2.10 Particles or Waves 36

Review Questions 37
Problems 37

3. Atomic Models **39–57**
3.1 Early Atomic Spectra 39
3.2 Thomson Model 40
3.3 Alpha Particle Scattering 40
3.3.1 Rutherford's Scattering Formula 41
3.4 Rutherford's Nuclear Model 45
3.5 Bohr's Model of the Hydrogen Atom 46
3.6 The Hydrogen Spectrum 49
3.7 Bohr's Model—Correction for Nuclear Motion 50
3.8 Hydrogen-like Atom 52
3.9 General Quantization Rule 53
3.10 Sommerfeld's Model 53
3.11 The Correspondence Principle 55
3.12 Deficiencies of the Quantum Theory 55
Review Questions 56
Problems 57

4. Wave Mechanical Concepts **58–73**
4.1 De Broglie's Hypothesis 58
4.1.1 Matter Wave 58
4.1.2 De Broglie Wavelength 58
4.2 The Davisson–Germer Experiment 59
4.3 Standing Wave of an Electron in a Circular Orbit 61
4.4 The Heisenberg's Uncertainty Principle 62
4.5 Some Applications of Uncertainty Principle 63
4.6 Wave Packets 65
4.7 Phase Velocity and Group Velocity 66
4.8 Time-dependent Schrödinger Equation 67
4.8.1 Free Particle Wave Equation 67
4.8.2 General Wave Equation 68
4.9 Physical Interpretation of the Wave Function 69
4.10 Probability Current Density 69
4.11 Time-independent Schrödinger Equation 71
Review Questions 72
Problems 73

5. General Principles of Quantum Mechanics **74–87**
5.1 Operators 74
5.1.1 Basic Definitions 75
5.2 Orthonormal Functions 76
5.3 Eigenfunctions and Eigenvalues 77
5.4 Hermitian Operator 78
5.5 Expansion of a Function in Terms of Eigenfunctions 80
5.6 Postulates of Quantum Mechanics 80
5.7 Measurability of Observables 84

5.8 Superposition State and Probability 85
5.9 Acceptable Wave Functions 85

Review Questions 86
Problems 86

6. Quantum Mechanics of Simple Systems 88–109
6.1 Free Particle in One Dimension 88
6.2 Particle in an Infinite Square Well 89
6.3 Particle in a Box 91
6.4 The Barrier Potential 93
6.5 Simple Harmonic Oscillator 94
6.6 Hydrogen Atom 96
6.6.1 Time–independent Schrödinger Equation 97
6.6.2 Quantum Numbers 99
6.6.3 Wave Function 99
6.7 Atomic Orbitals 102
6.8 Rigid Rotator 103
6.9 Angular Momentum 104
6.10 Electron in a Periodic Potential 106
6.10.1 Bloch Theorm 106
6.10.2 Kronig–Penney Model 106

Review Questions 107
Problems 108

7. Atomic Physics 110–145
7.1 Hydrogen Atom Spectrum 110
7.2 Orbital Magnetic Moment of Hydrogen Atom 111
7.3 Larmor Precession 113
7.4 Stern–Gerlach Experiment 114
7.5 Electron Spin 115
7.6 The Vector Atom Model 116
7.7 Spin-Orbit Interaction and Fine Structure 119
7.8 Pauli's Exclusion Principle and Electronic Configuration 121
7.9 Total Angular Momentum in Many Electron Atoms 124
7.9.1 *L–S* Coupling or Russel Saunders Coupling 124
7.9.2 *j–j* Coupling 125
7.9.3 Hund Rules 125
7.10 Energy Levels and Transitions of Helium 127
7.11 Alkali Spectra 128
7.11.1 Shielding by Core Electrons 129
7.12 Spectral Terms of Equivalent Electrons 130
7.13 Normal Zeeman Effect 131
7.13.1 Early Experimental Arrangement 132
7.13.2 Theory 132
7.14 Anomalous Zeeman Effect 134

7.15 Paschen–Bach Effect 137
7.16 Stark Effect 138
7.17 Characteristic X-ray Spectrum 138
7.18 Moseley's Law 140
7.19 Width of Spectral Lines 142

Review Questions 143
Problems 144

8. Statistical Physics 146–165

8.1 Statistical Analysis 146
8.1.1 Microscopic and Macroscopic Systems 146
8.1.2 Phase Space 146
8.1.3 Liouville's Theorem 147
8.1.4 Postulate of Equal Probability 147
8.2 Maxwell–Boltzmann Distribution Law 148
8.3 Law of Distribution of Velocities 149
8.4 Law of Equipartition of Energy 152
8.5 Quantum Statistics—An Introduction 153
8.6 Bose–Einstein Statistics 154
8.7 Fermi–Dirac Statistics 156
8.8 Maxwell–Boltzmann Statistics 157
8.9 Distribution Functions 158
8.10 Phase Volume and Eigenstates 159
8.11 Number of Eigenstates in an Energy Range 159
8.12 Planck's Blackbody Formula 160
8.13 Liquid Helium 161
8.14 Energy of a Fermi–Dirac System 162

Review Questions 164
Problems 165

9. Molecular Spectra 166–202

9.1 Electromagnetic Spectrum 166
9.2 Molecular Energies 167
9.3 Classification of Molecules 169
9.4 Rotational Spectra of Diatomic Molecule 170
9.5 Diatomic Vibrational Spectra 173
9.6 Rotation–Vibration Transitions 176
9.7 Vibrations of Polyatomic Molecules 178
9.8 Characteristic Group Absorptions 179
9.9 Infrared Spectrometer 179
9.10 Electronic Spectra 181
9.11 Frank–Condon Principle 182
9.12 Raman Scattering 183
9.12.1 Quantum Theory of Raman Scattering 183
9.12.2 Classical Description of Raman Scattering 184
9.12.3 Vibrational Raman Spectra 185

9.12.4 Rotational Raman Spectra 186
9.12.5 Raman Spectometer 186
9.13 Nuclear Magnetic Resonance (NMR) 189
9.13.1 NMR Principle 189
9.13.2 The NMR Spectrometer 190
9.13.3 Chemical Shifts 190
9.13.4 Indirect Spin–Spin Interaction 192
9.13.5 Applications of NMR 193
9.14 Electron Spin Resonance (ESR) 195
9.14.1 ESR Principle 195
9.14.2 ESR Spectrometer 196
9.14.3 Hyperfine Interaction 197
9.14.4 Applications of ESR Spectroscopy 197
9.15 Mössbauer Spectroscopy 199
9.15.1 Principle 199
9.15.2 Isomer Shift 200

Review Questions 201
Problems 202

10. Crystal Structure and Bonding 203–228

10.1 Crystal Lattice, Basis Vectors, Translation Vectors 203
10.2 Crystal Structure 204
10.3 Symmetry Operations 206
10.4 Bravais Lattice in Three Dimensions 207
10.5 Atoms Per Unit Cell in Cubic Lattices 208
10.6 Crystal Structure Terms 209
10.7 Miller Indices and Crystal Planes 210
10.7.1 Important Features of Miller Indices 211
10.8 Interplanar Spacing 212
10.9 Number of Lattice Points in a Cubic Lattice 214
10.10 Simple Crystal Structures 214
10.11 Derivatives of Cubic Structure 215
10.12 Diffraction in Crystals 216
10.12.1 Bragg's X-ray Spectrometer 217
10.12.2 Debye–Scherrer Method or Power Method 217
10.12.3 The Laue Method 219
10.12.4 Rotating Crystal Method 219
10.13 Reciprocal Lattice 220
10.14 Bonding in Solids 221
10.15 Interaction Forces and Bond Formation 221
10.16 Ionic Bond 222
10.17 Covalent Bond 225
10.18 Metallic Bond 226
10.19 Hydrogen Bond 226
10.20 Van der Walls Bond 226

Review Questions 227
Problems 228
